OpenShift Expert

Education plan with Red Hat training

Red Hat

Update **confidential** designator here

Agenda

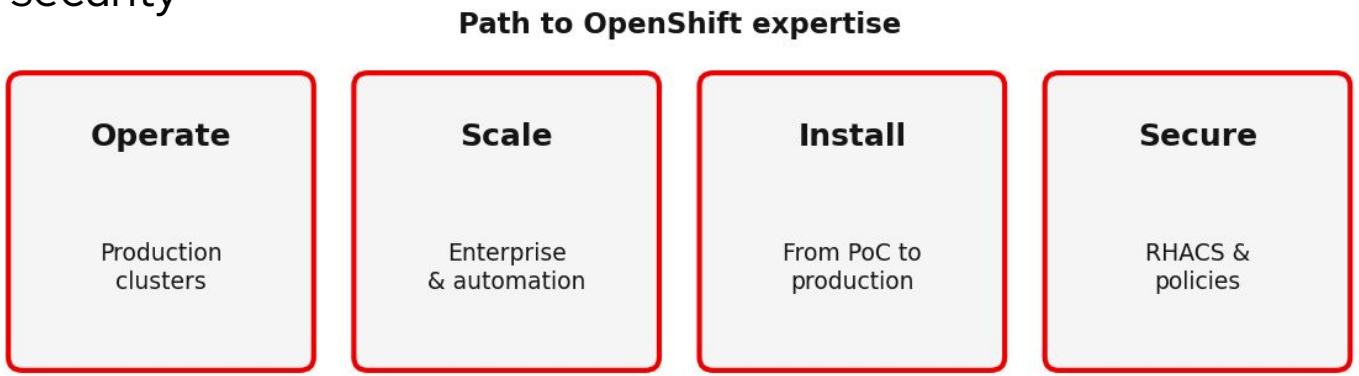
- Goals: expertise and certifications
- Four courses: DO280, DO380, DO322, DO430
- Recommended order and dependencies
- Exams and next steps
- Summary

Red Hat

Learning goals

Why this learning path

- Run and harden production-ready clusters
- Scale, automate, and master installation
- Add platform security with RHACS
- Prepare for exams (e.g. EX280, EX380)
- Roles: platform engineer, SRE, security



The four courses

DO280

Configuring a Production Cluster

- Multi-tenancy, quotas, and project layout
- Networking, storage, and cluster security
- Operators and recurring admin tasks
- Typical entry after basics (e.g. DO180)
- Foundation for DO380 and DO430 per Red Hat

DO380

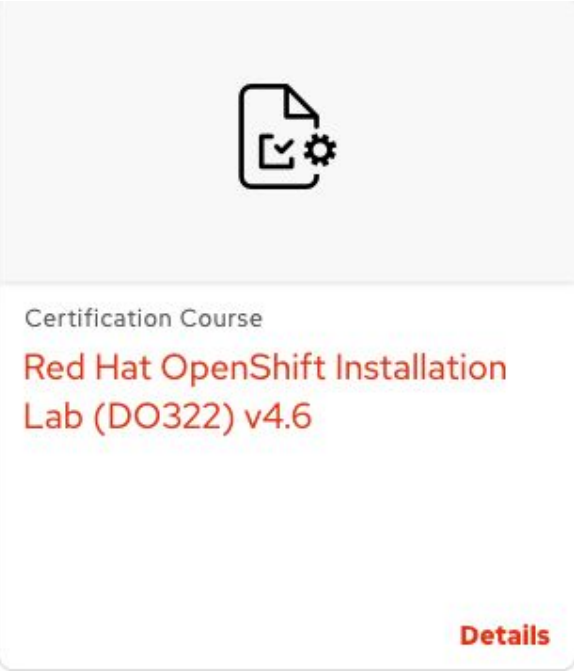
Scaling Deployments in the Enterprise

- Plan and run enterprise-grade clusters
- Authentication, monitoring, backup and restore
- GitOps and advanced deployment patterns
- Performance and capacity at scale
- Builds directly on DO280 topics

DO322

From proof of concept to production

- Installation paths and infrastructure choices
- Stand up, validate, and document clusters
- Hands-on lab scenarios
- Complements admin skills from DO280 / DO380
- Best after or alongside operational experience



Update **confidential** designator here

DO430

Securing Kubernetes clusters

- Red Hat Advanced Cluster Security (RHACS)
- Vulnerabilities, policies, and supply chain
- Network graph and compliance scanning
- Integrate with CI/CD and external systems
- Prerequisite: typically DO280 completed first

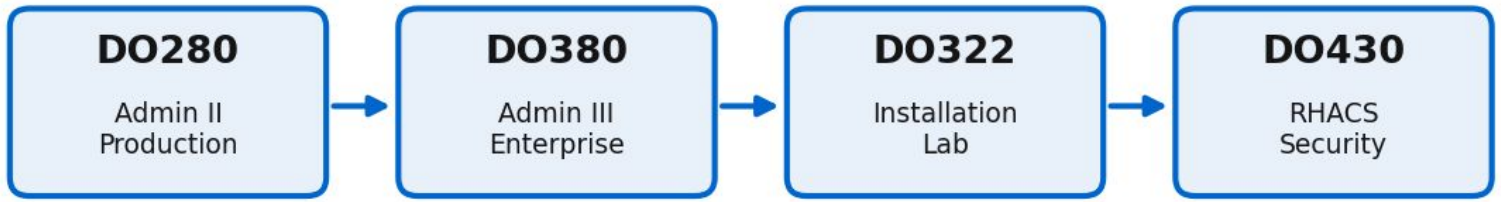
Red Hat

Order and planning

Recommended sequence

- 1. DO280 – configure and operate production clusters
- 2. DO380 – enterprise scale and advanced topics
- 3. DO322 – deepen installation (earlier if install-focused)
- 4. DO430 – cluster and container security with RHACS
- Teams focused on install may take DO322 after DO280

Recommended learning sequence



Timeline and next steps

- Exams: e.g. EX280, EX380, EX430 by focus area
- Anchor skills in lab or staging clusters
- Communities: learn.redhat.com, OpenShift docs
- Specialize: networking, storage, GitOps, or security
- Goal: repeatable operations and security practices
