Update **confidential** designator here

Welcome

OpenShift Architecture Technical Workshop (vILT)

Alfred Bach
Principal technical Instructor
RedHat FPL Global

Red Hat

Update **confidential** designator here

Today's agenda

- Meet your instructor
- Workshop goals, topics, and outcomes
- Prerequisites and how we will work together
- Participant document and GitHub resources
- Questions before we begin

Red Hat

Your instructor

Alfred Bach

- Guiding you through this OpenShift architecture workshop
- Here for explanations, labs, and discussion — ask anytime
- Aligns content with official workshop materials and repo
- Uses hands-on labs to reinforce each major topic
- Contact details shared in the participant channel if needed

The workshop

Update **confidential** designator here

What this training is

- Three half-day sessions – benefits, architecture, operations
- Design and architect on-premises OpenShift and public cloud
- Primary focus: infrastructure, not full application development
- Suitable for newcomers and returning attendees on new features
- Includes hands-on labs after the timed agenda blocks

Red Hat

Update **confidential** designator here

Core topics

- Architecture, installation, and day-two management
- Networking, storage, and container runtime (CRI-O)
- Virtualization (CNV) and varied hardware (ARM, single-node)
- Running additional solutions and workloads on OpenShift
- Day three optional: AI, GitOps, ACM, ACS, Quay, and more

Red Hat

Prerequisites

- Basic Linux, containers (Docker / OCI), and networking
- A laptop with a supported browser for labs and links
- Recommended OPEN modules: OpenShift for Infrastructure and Developers
- Red Hat Foundations – as advised in the participant materials
- Questions? Ask in chat or during intro Q&A

Update **confidential** designator here

Expected outcomes

- Architect and install an OpenShift environment
- Use advanced operations and monitoring approaches (e.g. CRI-O, Istio)
- Describe third-party and ISV integration patterns on OpenShift
- Prepare for PTP DO280 assessment; optional EX280 via self-study
- Navigate add-ons such as ACM, ACS, and Quay where covered

Red Hat

Agenda overview

Day 1 – Foundations
Welcome, K8s / OCP overview
Installation, storage, networking
RBAC and user management

Day 2 – Operations
Scaling, updates, operators, Helm
Backup / DR and security
Apps: cloud-native and pipelines

Day 3 – Optional
Workloads: virt, AI, dev tools
Add-ons: ACM, ACS, Quay
Next steps for installations

Schedule and time zones

- Interactive agenda (your time zone)
- Day 1 and 2: about 270 minutes each plus hands-on lab
- Day 3 optional: about 240 minutes plus lab time
- Use the site above for exact session times where you are
- Breaks follow the live session facilitator guidance

Red Hat

Materials

GitHub repository

- github.com/RHEPDS/vILT-OAW
- Documentation – supplementary docs for the workshop
- content – lab and module content as published by maintainers
- docs – additional published materials where applicable
- Clone or download if you want a local copy during the class

How we will work

- Follow the live agenda and lab instructions from the repo
- Keep the participant document open for deep references
- Use chat or raise hand for questions – interaction is encouraged
- Complete labs in the allocated time where possible
- Feedback welcome – it improves future deliveries

Thank you

Questions? Let's begin – welcome to the OpenShift Architecture Workshop.
